## CORALLITE

This series of lights & furniture is inspired by the organic forms & textures of the coral reef.

The uplighters & suspended lights, in addition to providing light in a single direction, light up throughout, glowing with an effervescence & taking on a sculptural form.

The entire surface emits light through its pores emanating a soft glow which highlights the textural quality of the material.

The center & side tables that are a part of this collection also light up similarly with diffused light permeating through the surface.

Corallite is made of 80% recycled material with almost no water or electricity used in its production creating almost zero carbon footprint, rendering the collection sustainable & extremely ecofriendly.

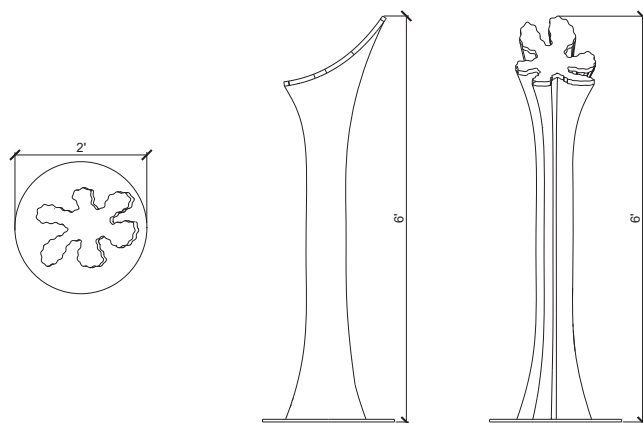

A handwritten signature in black ink, which appears to read 'Gavin - Luni'. The signature is stylized with a large, looping initial 'G'.
